

QUESTIONS AND ANSWERS
CONSULAR INTERCOM REPLACEMENT SERVICES
SOLICITATION NUMBER 19-AM10-23-Q-0029

Below are answers to the questions received from offerors for the subject solicitation by October 9, 2023.

- 1. Question** – Please let me know the size and ceiling height of the waiting area as there is no such information in the SOW. The amplifier 1x REVAMP2120T that I included in the BOM for the waiting area, can provide enough power to cover approx. 1000 sqm with 20% wattage headroom for average 70V ceiling speakers at 3m ceiling height for paging. Exact dimensions of the waiting area need to be clarified for the proper amplifier choice in this zone.

Answer – The entire area is 1,636.11 square feet and the ceiling height of the waiting area is 9 ft.

2. Question – Lastly, Can we use in-ceiling or wall-mounted speakers (or both types) without volume control on each speaker in the waiting area providing the centralized volume control for the whole zone?

Answer – Wall-mounted or in-ceiling speakers are OK.
